

1st International Workshop of the Steatohepatitis in HIV Emerging Research (SHIVER) Network

The goal of this workshop is to provide a multidisciplinary view of the current state of nonalcoholic steatohepatitis (NASH) in HIV research, treatment, and disease burden both nationally and internationally, and to establish the platform for collaborative research projects between Canada and institutions leaders on the topic. During this workshop, Canadian scientists and the members of the SHIVER (Steatohepatitis in HIV Emerging Research) Network will work together to establish research priorities in the field of NASH in HIV. This workshop is the only forum that brings together an international group of academics, clinicians, community members to review the latest science and foster collaborative work towards improving understanding of this major comorbidity in people living with HIV.

Speakers:

Dr. Giada Sebastiani, Montréal, CAN
Mr. Kenneth Monteith, Montréal, CAN
Dr. Emmanuel Tsochatzis, London, GBR
Dr. Caryn Morse, Winston-Salem, USA
Dr. Lisa Barrett, Halifax, CAN
